MEMORANDUM TO THE WARROOM AND AMERICAN REPUBLIC

FROM: PETER NAVARRO

SUBJECT: UPDATE MICHIGAN DATA IN NAVARRO IMMACULATE
DECEPTION REPORT

At midnight on Election Day, President Trump was ahead of Joe Biden in Michigan by over 293,000 ballots.ⁱ As of December 21, Biden's alleged margin of victory versus President Trump was approximately 154,000 ballots – a statistically improbable turnaround.

This memorandum provides a Michigan update to the original Navarro Report. It calculates that there are over 379,000 potentially illegal ballots in Michigan – more than twice the alleged Biden victory margin.

These 379,000 potentially illegal ballots have been called into question by three types of election irregularities – outright fraud in the form of dead voters; a significant process foul in the form of a failure to provide adequate voter identification check; and significant statistical anomalies in the form of inexplicable vote surges.

Dead Voters

An analysis conducted by Richard Baris, Director of *Big Data Poll*, on Michigan's data voter rolls for the 2020 presidential election, found that approximately 9,500 voters confirmed dead through the Social Security Death index (SSDI) were marked in the state's mail-in ballot voting database as having returned ballots.ⁱⁱ Also, another 2,000 voters in the Michigan voter rolls are 100 years old, and they are not listed as "living centenarians" in the state of Michigan.ⁱⁱⁱ

No Voter ID Check

The Texas lawsuit filed in the U.S. Supreme Court on December 7^{thiv} contained data from the Wayne County Statement of Votes Report. This data reveals that 174,384 absentee ballots out of 566,694 **absentee ballots** cast in Wayne County were illegally counted without individuals' voter registration numbers. In other words, these ballots were not tied to a legally registered voter.^v

Inexplicable Vote Switching and Vote Surges In Favor of Biden

Based on an analysis of time-stamped data from *New York Times* vote tabulation updates on November 4th, we have learned the following:

After President Trump had taken a substantial lead over Biden within a 9-hour period, within just 5 seconds at around 6:31 AM Eastern time,^{vi} Joe Biden's vote totals skyrocketed by 141,258 votes while Donald Trump received just 5,968 ballots in the same timeframe.^{vii} Note that this Biden surge was over 30 times the expected count based on the preceding vote counting rates for each candidate near that time period.^{viii}

At 3:50 AM Eastern Time on November 4th, lightning struck a second time. Joe Biden received a large dump of votes, approximately 54,497 ballots, while President Trump at the same time received just 4,718 ballots.^{ix}

As a final comment, please note that this analysis does not factor in how many ballots statewide were potentially altered resulting from the 65 Michigan counties that the use of the Dominion Voting Machines.^x According to an affidavit signed by Brian Teasley, a statistician who has conducted statistical data analysis for private sector companies to detect fraud for thirty years,^{xi} factoring in possible voting machine irregularities would add at least 305,000 additional ballots to those in question.
