

THE COVID VACCINE & CHILDREN

A SECOND OPINION

The number of **DEATHS & ADVERSE REACTIONS** reported after the COVID vaccine is staggering.

VAERS¹, the US Government database that tracks vaccine reactions show a total of **1,088,560 adverse reactions** and **23,149 deaths** following the COVID-19 vaccine (as of 1/28/22). This is **more reports than from all previous vaccines combined**. This number is likely underreported. An HHS funded study² shows that the VAERS system captures only 1-10% of total vaccine reactions.

Multiple large-scale studies have demonstrated the negligible risk to healthy children from COVID-19. A large German³ study showed **zero deaths for children under 5** and a case fatality rate of three out of a million in children without comorbidities. And a Johns Hopkins study⁴ of 48,000 children **showed a zero mortality rate** in children under 18 without comorbidities. Another study in *Nature*⁵, shows children under 18 without comorbidities have **virtually no risk of death**.

Healthy children face virtually **ZERO RISK** of death from COVID.

THE CLINICAL TRIALS for children 2 to 4 years old **FAILED.**

In an unprecedented move, the FDA's Advisory Committee is considering if a three-dose COVID-19 vaccine series should be authorized when **there are only data available on two doses**⁶. Pfizer's own data demonstrated that **those two doses, did not mount a sufficient antibody response**. Despite this failure, the EUA application is moving forward with a potential third dose added if future data supports it⁷. This is an unprecedented proposal not backed by science.

A study in *Nature*⁸ shows **children's bodies clear the virus more easily** than adults. Another study in *Nature*⁹ demonstrates how **children efficiently mount effective immune responses**: "immune systems that naturally generate robust, cross-reactive and sustained immune responses to SARS-Cov-2 ..."

Children's bodies are uniquely suited to handle COVID-19 with a **SURVIVAL RATE OF 99.995%**

Vaccinated children face a **SUBSTANTIAL RISK OF MYOCARDITIS**

A study out of Hong Kong¹, showed **one out of every 2,700 12-17 year old boys being diagnosed with myocarditis** following the 2nd dose of Pfizer's Comirnaty vaccine, or 37 per 100,000 vaccinated. A study from Kaiser² found the same rate of myocarditis in 12-17 year old American boys, 1/2700. The fact that the same incidence rate was found in in both studies is alarming.

A statement issued by American Academy of Pediatrics³ in October of 2021 declared **a national state of emergency in child and adolescent mental health.**

ER visits for mental health among **children 5-11 rose by 24%**
ER visits for mental health among **children 12-17 rose by 31%**
ER visits for suspected **suicide attempts among 12-17 girls rose to 50%**

CHILDHOOD SUICIDE RATES have exploded.

OVER ONE THIRD OF ALL CHILDREN are estimated to HAVE NATURAL IMMUNITY to COVID

According to CDC's data, over **one third of children have durable, naturally acquired immunity** to COVID⁴. There is no ethical justification for superfluous vaccination, when these **naturally immune children have nothing to gain.** Vaccination however puts them at **elevated risk of reactions to a vaccine** with no long term safety data.

Are they being objective? A study published in the *New England Journal of Medicine* asserted that two doses of Pfizer/BioNTech vaccine "was found to be safe, immunogenic and efficacious in children 5 to 11 years of age". It includes a disclosure stating that **the study was funded by BioNTech & Pfizer**⁵. Of the 33 authors on the study, **94% have financial interest** in the vaccine makers, **60% were employees** of BioNTech or Pfizer and **57% had received payments** from the companies or owned stock.

The studies claiming safety and efficacy are FUNDED AND CONDUCTED BY THOSE WHO STAND TO PROFIT.
